The Department of Natural Resources is providing this report to satisfy the requirements of the "Procedures Concerning Certain Licenses Act", IC 14-11-4, and its associated administrative rule, 312 IAC 2-3. The application files are available for public inspection at the Division of Water's office in Indianapolis. Please contact the Division's Technical Services Section at (317) 232-4160 or the toll free number 1-877-928-3755 to make an appointment for file review. Photocopies may be made for a nominal charge of \$0.10 per 8 1/2 " X 11" copy.

A pre-action public hearing on an application may be requested by filing a written petition with the Director, Division of Water:

Michael W. Neyer, P.E., Director Division of Water Room W264 402 West Washington Street Indianapolis, Indiana 46204

For a petition to be considered valid it must:

- 1. Contain the typed or legibly printed name and complete mailing address of each petitioner;
- 2. Be signed by a minimum of 25 individuals who are at least 18 years old and either reside in the county where the project will take place or own real property within 1 mile of the project site;
- 3. Affirm that each signatory to the petition satisfies the requirements of item 2; and
- 4. Identify the application for which the public hearing is being requested either by the application # or the applicant's name and the project description.

A petition which does not meet these requirements will be considered invalid and the hearing request will not be granted.

A person may request that the Department provide written notice of its action on an application by filing a written request with:

Division of Water Room W264 402 West Washington Street Indianapolis, Indiana 46204

The request must identify the application by either the application # or the applicant's name and the project description.

Application # : FW-24772

Stream : East Branch Stony Run

Applicant : Lake County Drainage Board

Dan Gossman

2293 North Main Street Crown Point, IN 46307-1854

Description

: Stony Run East Branch will be excavated back down to its original elevation. The proposed maintenance to Stony Run East Branch will not increase the drainage capacity beyond the original design or expand the area drained by the regulated drain as originally designed. Maintenance required includes removal of accumulations of logs, root wads, trees in danger of falling into the regulated drain or obstructing the flow, and other debris that spans the waterway using hand operated and/or heavy equipment, dipping, dredging, and/or removing sediment from the channel bottom with a bucket, installation of two in-channel sediment basins approximately 80 feet long and 3 feet deep; slope repair, and riprap bank protection in areas of erosion, mimicking the natural slope of the channel bank. All work will be performed from one side of the channel. No spoil material will be place in the in wetlands. Drag line mats will be used beneath heavy equipment in wetland areas. All wetland areas will be identified and marked on plans. Silt fence will be placed along the ditch side of spoil piles. Disturbed areas and spoil piles will be seeded and mulched. Details of the project are contained in information and plans received at the Division of Water

on November 5, 2007.

Location : Along Stony Run East Branch between Lake Holiday and 137th Avenue

Stream : Sparrow Creek

Applicant : *Indiana Department of Transportation

Alebachew Tilahun

100 North Senate Avenue Room N642

Indianapolis, IN 46204-2216

Description

The existing single span reinforced concrete girder bridge carrying State Road 32 over Sparrow Creek will be replaced with a new structure on essentially the same alignment to improve traffic flow. The new structure will be a single span precast reinforced concrete 3-sided structure with a span length of 40'. The structure will have a length of 55.5'. The abutments and piers will be skewed 45 degrees to align with the streamflow. The retaining walls on the north side of the structure will be reconstructed to protect the ninety degree bend in the stream from scour. The proposed structure will rest on spread footing foundations. The channel will be lined with riprap from the tip of the south wing walls through the interior of the structure to the edge of the north retaining walls to protect against scour. The roadway will require approximately a 1' grade raise to accommodate the new structure. The new approach roads will be elevated a maximum of 9' 2" above the existing approaches. The existing structure will be completely removed. The project (is/was) federally funded. Details of the project are contained in information and plans received at the Division of Water on March 26, 2008.
